

IDEA #2

Design By Hemp

”Design By Hemp is a completely new project. The project itself is to produce environmentally friendly furniture that is made of hemp. The reason why hemp, as a material, is chosen, is that it reduces the water consumption during production by 65% and there is no need for the use of chemicals for growing the plant or dyeing the fabric. Hemp can be made into several materials, such as normal textiles, and textiles that resemble leather.”

Needed competences:

- designing knowledge
- multimedia design knowledge
- programming skills
